Hi,

yes, my bad. I've never heard about vzdump

But as far as I understand you should do the following:

- we suppose that vzdump-162.xdelta was created as a delta between vzdump-162.tar and newer CT 162 state.

-

```
# cd /vz/dump
```

```
# xdelta patch vzdump-162.xdelta vzdump-162.tar vzdump-163.tar
```

```
# vzdump --restore /vz/dump/vzdump-163.tar 163
```
