Subject: VZAgent problem

Hi all,

I've just setup the Virtuozzo Container 4.0 on Redhat Enterprise 5.0.

The VZAgent is running, I could create a new Container, but I couldn't login to Node via Parallels Management Console and Parallels Infrastructure has not worked correctly.

When I login via PMC, the error has been detected is
--Test the SSL connection to "172.16.41.153".: Connection to vzagent was closed [error 10061 (No connection could be made because the target machine actively refused it.
)]
--Test the SSH connection to "172.16.41.153".: Connection to vzagent was closed

PS: I can access via SSH from another PC.

Pls help me to overcome this problem

Thank you very much
