OpenVz works with the kernel scheduler, you can set cpuunits for giving priority's like this:

```
root@windu:~# vzcpucheck -v
VEID CPUUNITS
-----
0 1000
101 4000
102 2000
103 3012
Current CPU utilization: 13024
Power of the node: 221180
```

a highest value means more power.
