Basically, we should go step by step and check the packet on each interface. In you case:

- VE0, eth0 (seen)
- VE0, venet0
- VEnnn, venet0

When you'll find a place where packets are lost. Next we'll have to check actual reason by
netstat -s
and investigating iptables.

Right now I think you should start with 'ip r g' in VE0 as I have suggested previously.
