May be solved.

=====in policy file =====

<skip>

web1	venet	ACCEPT
venet	web1	ACCEPT
loc	web1	ACCEPT
web1	loc	ACCEPT

<skip>

=====

=====interfaces=====

#ZONE INTERFACE BROADCAST OPTIONSnet eth0

loci eth0 detect

venet venet0 - routeback

#LAST LINE -- ADD YOUR ENTRIES BEFORE THIS ONE -- DO NOT REMOVE

=====

[root@localhost two_work_config_]# cat zones | grep venet

venet ipv4

ven1:venet

Need set acl between venet0 interface and vps server.

Now I try set acl for group of vps, and, i think, what it's shorewall trouble, not ovz.
