I was sitting doing nothing (well IRC-ing actually), when I suddenly became unable to reach VPS:es from other VDS:es.

I was on a VPS with ip 172.16.1.10, and I couldn't ping another one with the ip 172.16.1.11.

I have 4 VPS:es, and it's the same for all of them, I can't reach them from another VPS.

The thing is, they can reach the internet (NAT:ed), and the HN can reach both!

No ip tables has been se up on any of them.

Any suggestions?
