Quote:I guess I am just having a different issue....

I am trying to install CSF on a VE running cpanel, and I am getting:

iptables: Unknown error 4294967295

LOG tcp opt -- in * out * 0.0.0.0/0 -> 0.0.0.0/0 limit: avg 30/min burst 5 LOG flags 0 level 4 prefix

`Firewall: *TCP_IN Blocked* '

Error: iptables command [/sbin/iptables -v -A LOGDROPIN -p tcp -m limit --limit 30/m --limit-burst 5 -j LOG --log-prefix 'Firewall: *TCP_IN Blocked* '] failed, at line 204

any suggestions?

Hi im getting exactly same error. I tried to install CSF on VE too. But after read thread I think that guys do is install CSF on Hardware Node, not in VE. But I dont know if Im wrong and there is a way to do it.

This is interesting because, in my case, I have a VE running with Plesk CP and Plesk have a Firewall mode. (So what happens with firewall mode or iptables inside VE?)

So the question maybe is, if we are running VE is better to install CSF or whatever on HN or do the install in VE level?

Thanks!
