Can you try this when you login to the VE ?

rpm -qf /etc/udev/makedev.d/50-udev.nodes
udev-095-14.9.el5

rpm -e udev-095-14.9.el5 –nodeps

Or execute this directly from the host:

vzctl exec veid update-rc.d -f udev remove
vzctl restart veid

If that fails as well, try installing the vzdev rpm by copying it from the HN to /opt on the Container.

Hope that helps..
