Subject: [answered] Dbus inside VE

Hello,

I'm having a problem running dbus inside a CentOS 5 VE.

The service fails to start without logging any error messages.

If I try to start it from the command line by running:

dbus-daemon --system --nofork

I receive the following output:

Failed to start message bus: Failed to drop capabilities

Using a CentOS 4 template, the service starts without problems.

Any advice would be much appreciated. Thank you.
