Hello , i install OpenVZ with this Kernel : 2.6.18-92.1.13.el5.028stab059.6PAE

i created a VPS by this command :

vzctl create 222 --ostemplate centos-5-i386-afull --config vps.basic

now i want add an ipaddress to my VPS by this Command :

vzctl set 222 --ipadd 74.222.13.149 --save

BUT i have a problem . i see an error after i entered this command:

[root@localhost /]# vzctl set 222 --ipadd 74.222.13.149 --save
Adding IP address(es): 74.222.13.149
arpsend: 74.222.13.149 is detected on another computer : 00:d0:02:c0:58:00
vps-net_add WARNING: arpsend -c 1 -w 1 -D -e 74.222.13.149 eth0 FAILED
Saved parameters for CT 222

what's this problem ? how can i fix this problem ?!

notice : i installed OpenVZ and HyperVM . i have this error message when i start a VPS was created by HyperVM and when i want add ip to my new vps was created via ssh and command line too!!!!

what's problem ?!
