Subject: Centos 5.2 HN, Ubuntu 8.04 VE, Networking issue [Solved]

Hi,

I could not get network to start on my VE on Ubuntu, and later when I tried on Debian. I discovered that the /etc/network/interfaces.template listed auto lo and the VE was discovering it on startup as well. Thus networking was broken. I found this when I ran invoke-rc.d networking restart
.

I commented out the entries in the interfaces.template file and it worked. Note that making changes to /etc/networking/interfaces will be overwritten when the VE is restarted. Hope this helps someone out there breaking their head like I did.

Venkat
