Hello,

Quote:

```
[root@fedorahost ~]# cat /proc/mounts
```

```
...
```

```
/dev/mapper/VolGroup00-vps001 /vol/vps001 ext3 rw,data=ordered 0 0
```

```
/dev/mapper/VolGroup00-vps001 /vz/root/301/data ext3 rw,data=ordered 0 0
```

Both of that records don't have user_xattr and acl options set. They might to be default options (tune2fs -l DEVICE | grep "Default mount options").

If this functionality works on the HN try to use it inside VE.
