I have openvz on a server with 4 gigs ram.

I have 5 vms.

ram usages usually shows as ~:
vm1 160/512
vm2 272/512
vm3 539/2048
vm4 381/512
vm5 279/512

I have 2 vms that keep crashing with the:
"Cannot Allocate Memory" error.

It doesn't matter how much ram I give them the ram usage suddenly spikes and the vm is unusable.

any ideas as to what is going on wild be great!!!
