Subject: OpenVZ, vzrpm, vzyum?

Hi!

I have a CentOS (RHEL) v5 HE, and few CentOS v4 VE's. Problem is that CentOS4 had RPM v4.3 and CentOS5 has RPM v4.4, so I have to use either vzyum/vzrpm from HE, or yum/rpm from local machines.

Is there a way to combine this two somehow? Any ideas?

I would like to use vzyum because of centralized administration, patching and updating, and I need local rpm because of rpmbuild - I'm not satisfied with rpmbuild --nodeps....

Any ideas?
