Subject: [SOLVED] vzmigrate live on debian lenny

Hello,

Since Lenny was released a while ago we are testing the Debian supplied openvz kernel (linux-latest-modules-2.6.26-1-openvz-amd64).

All seems to work okay but the live migration does not work as before. The non-live however, works without a problem.

It seems to be related to the switching of the IP adress from machine a to b .. ? Does anyone have any idea to what this might be related?

Oh, and vzctl is v3.0.22 (as in debian repositories)

My vzmigrate (verbose) output:

Quote:www7b:~# vzmigrate -v --online --keep-dst www7a 7008
OPT:-v
OPT:--online
