Ok,

00:1c:f0:28:7b:3c belongs to adls-modem, doesn't it?

And does 00:18:51:bb:fa:69 belong to veth101.0?

Could you run tcpdump with "-e" parameter on all interfaces, i.e. on et1, br0, veth101.0 (on the HN) and on eth0 (inside VE, just in case)?
