Need to keep running MAKEDEV. Hrm.

Seems udev is running inside VE. Please, read
http://wiki.openvz.org/Container_enter_failed

Second issue though, I seem unable to access the HTTPS Webmin interface. Any thoughts on this?

Lack of information.

It might be network related problem, netfilter related problem (check iptables rules), webmin-specific problem (in this case you'd better ask on their forum).
