Subject: Quota on mounted fs

Hello,
I´m having trouble trying to enable quotas on a mounted filesystem. I set four LVMs, exported with --devnodes and mounted with usrquota,grpquota:
[root@server home]# mount
[snip]
/dev/mapper/VolGroup00-THome on /home type ext3
(rw,data=ordered,nosuid,noexec,usrquota,grpquota)
/dev/mapper/VolGroup00-TTmp on /tmp type ext3 (rw,nosuid,noexec,data=ordered)
none on /proc/sys/fs/binfmt_misc type binfmt_misc (rw)

The problem is, when I try to enable quotas, I get the following:
[root@server ~]# quotaon /home
quotaon: using /home/aquota.group on /dev/mapper/VolGroup00-THome [/home]: Permission denied
quotaon: using /home/aquota.user on /dev/mapper/VolGroup00-THome [/home]: Permission denied

This is driving me nuts for some time now. I tried fiddling with about just plain everything vzquota- or vzctl-related and found nothing related to this in the Wiki or here in the forum, so I´m currently out of ideas. Anyone has any clue on it?

To present time, I´ve been only able to use quotas on the root filesystem. Any help would be immensely appreciated, and thanks in advance.
