I had same issue and my solution was to compile
last e1000e driver (e1000e-0.5.18.3.tar.gz)

```
#rpm -Uhv ovzkernel-devel-2.6.18-92.1.18.el5.028stab060.8.x86_64.rpm
```

```
# cd e1000e-0.5.18.3/src/
```

```
# BUILD_KERNEL=2.6.18-92.1.18.el5.028stab060.8 make
```

then copy the e1000e.ko to /lib/modules/..

(in my case /lib/modules/2.6.18-92.1.18.el5.028stab060.8/kernel/drivers/ net/e1000e/e1000e.ko)

reboot.. that should do it

make sure you do that for each OVZ kernel update till this is fixed
