Hmmmm.....

I unpacked ovzkernel rpm file and placed all files into those directories where they must be.
Ovzkernel booting but returns error.

RAMDISK: Couldn't find valid RAM disk image starting at 0.

VFS: Cannot open root device "sda4" or unknown-block(0,0)

Please append a correct "root=" boot option

Kernel panic - not syncing: VFS: Unable to mount root fs on unknown-block(0,0)

My elilo.conf looks like:

```
[root@zeus ~]# cat /boot/efi/EFI/redhat/elilo.conf
```

```
prompt
```

```
timeout=20
```

```
default=linux
```

```
relocatable
```

```
image=vmlinuz-2.6.25-14.fc9.ia64
```

```
label=linux
```

```
initrd=initrd-2.6.25-14.fc9.ia64.img
```

```
read-only
```

```
append="root=UUID=31235982-9717-4e5d-ae07-bfc327105ecd"
```

```
image=vmlinuz-2.6.18-92.1.18.el5.028stab060.8
```

```
label=openvz
```

```
initrd=vmlinuz-2.6.18-92.1.18.el5.028stab060.8
```

```
read-only
```

```
root="/dev/sda4"
```

My fstab looks like:

```
[root@zeus ~]# cat /etc/fstab
```

/dev/sda4	/	ext3	defaults	1	1	
/dev/sdb1	/home/virtual	ext3	defaults	1	2	
/dev/sda2	/boot	ext2	defaults	1	2	
/dev/sda1	/boot/efi	vfat	umask=0077,shortname=winnt	0	0	
tmpfs	/dev/shm	tmpfs	defaults	0	0	
devpts	/dev/pts	devpts	gid=5,mode=620			0 0
sysfs	/sys	sysfs	defaults	0	0	
proc	/proc	proc	defaults	0	0	
/dev/sda3	swap	swap	defaults			0 0

Can someone know about this problem?
