Subject: Add route when venet0 comes up

Hi everybody,

OS: CentOS 5

I would like to add a route to a table automatically when venet0 comes up (on system start for example).

To add the route manually this works:
ip route add 10.3.0.0/24 dev venet0 table mytable

But after a system restart this is gone of course.

I tried to create the file /etc/sysconfig/network-scripts/route-venet0 with this content:
10.3.0.0/24 dev venet0 table mytable

It works this way with normal eth interfaces but not with venet0.

Any idea?

Thanks
schogge
