Hi,

Online migration works fine with a few VEs but I have three VEs which always fail while live-migration

```
# vzmigrate --remove-area no --keep-dst --online -v 192.168.200.2 201
OPT:--remove-area
OPT:--keep-dst
OPT:--online
OPT:-v
OPT:192.168.200.2
StartingOpenVZ is running...
201.conf                                     100% 1756
1.7KB/s  00:00
Saved parameters for VE 201
    SyncingLive  Setting up checkpoint...
    suspend...
    get context...
Checkpointing completed succesfully
    Setting up checkpoint...
    join context..
    dump...
Can not dump VE: Device or resource busy
Error: splice is used by 24743,907(apache2)
Checkpointing failed
Error: Resuming...
```

What is the problem here?

Thank you,
divB
