Subject: 014.4: ipv6 needed?
Posted by Xandrian on Thu, 08 Jun 2006 06:56:02 GMT
View Forum Message <> Reply to Message

hi,

i installed the 14.4 testing kernel on my system a view minutes ago. now it's running!

but i have to compile the kernel with ipv6 which is a function i do not need at the moment. if i compile the kernel without the ipv6 the machine is starting but crashed after i tried to connect via ssh. after reset the machine the same game starts again

i cannot see if i got a message on the screen because it's a remote machine but i found this in the syslog:
