
Subject: Weird network -> default gateway

Hi,

I've installed OpenVZ on a Debian 5.0.

Everytime I start a container it gets the right IP address, but the default gateway is set to 192.0.2.1 even though I don't have any hosts in that IP range.

If I change it in the containers `/etc/network/interfaces` it is then changed back to 192.0.2.1 when I close/restart/start the container.

I've looked through my configuration files, and even tried to strace the start, but can't find anything about the default gateway.

Help!
