Subject: Firewall on HN or VE?

On one server setup with proxmox i intent to have 4 VE (web, dns, mysql, mail). I guess i'll have 1 IP for each VE. Concerning the firewall i'm thinking of configuring iptables but my concern is to do it on HN or on each VE.
Similar idea is should i install mod_evasive and dos-deflate on HN or on each VE?
I'm looking for best way to do it so your ideas are more than welcome.
Thanks
Greg
