I've been going through the source code for vzsplit:

<http://git.openvz.org/?p=vzctl;a=blob;f=src/vzsplit.c;h=33c9d1f54c4fa7b12438fa4aea94c42f540bfe8a;hb=68e1b402f09ae45b49df8d1ae22fd3bfb60324d4>

Unfortunately it's not been much help.

How do other people manage to create a container manually without knowing how to calculate kmemsize.
