I'm hoping some of the vz/bind experts can lend a hand here... We migrated our secondary DNS server to openvz and it is working great with one exception, can anyone shed some light on the following error?

31-Jul-2009 22:30:17.394 socket.c:1156: unexpected error:
31-Jul-2009 22:30:17.394 internal_send: 192.0.2.1#53: Invalid argument

The IP 192.0.2.1 is the gateway address setup by openvz.

[~]#uname -a
Linux 2.6.18-128.1.1.el5.028stab062.3 #1 SMP Sun May 10 18:54:51 MSD 2009 x86_64 x86_64 x86_64 GNU/Linux

[~]# rpm -qa | grep bind
bind-libs-9.3.4-10.P1.el5_3.3
bind-utils-9.3.4-10.P1.el5_3.3
bind-9.3.4-10.P1.el5_3.3

If there is any other information I can provide please let me know.

Thanks!
