Subject: Live migration and SAN

Hello,

I have a queston about the live migration feature of openVZ.
As I understand the 'vzmigrate' man page, the VPS is copied with rsync from one host to the other. In my case, this would be unnecessary because all the VPS in my setup lie on a SAN, which is shared across all hosts. Is it possible to just copy the state of the VPS, not the whole directory tree?

Regards,
Thomas Rasch
