Thank you.

This is my scenario(public ip is 193.19.x.y):

root@ubu01:~# hostname
ubu01.domain.com

root@deb01:~# vzctl set 777 --nameserver 193.19.*.* --ip 192.168.1.1 --save

root@ubu01:~# vzlist -a
VEID NPROC STATUS IP_ADDR HOSTNAME
777 8 running 192.168.1.1 vps.ubu01.domain.com

Allow access from outside to inside vps port 80

iptables -t nat -A PREROUTING -p tcp -d 193.19.x.y --dport port_num -i eth0 -j DNAT
--to-destination 192.168.1.1:80

Allow access from inside the vps to the outside internet

iptables -t nat -A POSTROUTING -s 192.168.1.1 -o eth0 -j SNAT --to 193.19.x.y

But it is not working. I don't have internet to/from container.

I did something wrong ?
