---

in HW node add iptables rule smth like:

```
iptables -A POSTROUTING -s 1.2.3.5 -d 10.1.1.0/255.255.255.0 -j SNAT --to-source 10.1.1.1
```

where 1.2.3.5 is vps ip

10.1.1.0 your private network (change subnet mask as needed)

10.1.1.1 is ip of HN interface to the 10.1.1.0 network

or if some how you don't need such interface (going through gateway?) you can put ip 1.2.3.4
