Quote:First I tried to see if the kernel was installed:

```
#rpm -q ovzkernel-2.6.8-022stab077.1.i686.rpm
```

package ovzkernel-2.6.8-022stab077.1.i686.rpm is not installed

You don't need to add rpm-extension to the packet name, that you query, in rpm -q command.

Thus the right command is:

Quote:rpm -q ovzkernel-2.6.8-022stab077.1

To get list of files, that this packet owns:

Quote:rpm -ql ovzkernel-2.6.8-022stab077.1

FYI:

/boot/vmlinuz-2.6.8-022stab077.1 - ovz kernel,

/boot/initrd-2.6.8-022stab077.1.img - ovz initrd image.
