my typical installation for HN is:

/boot 100MB

/ all_space-swap

swap

but i don't use HN for anything more except openvz

about ip's:

in some servers I do following:

net.ipv4.conf.eth0.proxy_arp = 1

net.ipv4.conf.eth1.proxy_arp = 1

and then network will see containers ip addresses

(also my firewall(router) has proxy arp'ing on interfaces for LAN, but i don't know if it's a case)
