Subject: Can't enter VE

Hi all,

I've been migrating my VEs to another physical server (5 VEs in total).

I used vzmigrate, and all are up and running on the new machine. However, I'm unable to enter one of the VEs: if I type 'vzctl enter xxx' (yes, I'm replacing xxx with the VE ID) it just hangs indefinitely.

In other respects, the VE appears to be running fine: starts and stops without problems, and the website running on the VE is accessible ... I just cant enter into the VE. It was fine on the old server, and none of the other VEs on the new server are affected.

Any ideas how I go about debugging this please? The logs don't reveal anything, and using --verbose when I call vzctl doesn't generate anything
