Subject: LSB init script for each VPS

Hi,

I am setting up HA in two nodes with both running 3 VPS each. 3 VPSs are live and other 3 in the second node are standby.

I need LSB init scripts for each VPS to start and stop each VPS using heartbeat. I know there is a vz script to start/stop all the VPSs. Anybody has such LSB style init script or any hints to write one myself ?

Thanks for the help.
