Subject: Can not drop privileges CAP_AUDIT_WRITE

Hi guys,

I can't get dbus or sudo working on the 2.6.27.42 build from December 25th. This is a brand new box running fedora 12, yet untested, so I'm not sure where the issue is. In the VE, these commands can't drop permissions for CAP_AUDIT_WRITE and choke.

Is this something that's wrong with this kernel or userland or something else?

Dan
