Subject: Ubuntu VE starts only one process

Hello,

I've a Problem with OpenVZ and Ubuntu Karmic Koala. After i had updated the VE to karmic, i was wondering why cron isnt running. Ive tried /etc/init.d/cron start but it fails with that message: start: Unable to connect to Upstart: Failed to connect to socket /com/ubuntu/upstart: Connection refused

So it seems to be a upstart problem, was my 1st thought. But because the ve is in use, ive created a clone of it for experimenting wit that problem. And that seems to be my 1st luck that day. The new VE fails to start properly!

```
# vzctl start 2094
Starting VE ...
VE is mounted
Adding IP address(es): 192.168.2.94
Setting CPU units: 4290
Configure meminfo: 153949
Set hostname: ve2094
File resolv.conf was modified
VE start in progress...
```

```
# vzlist 2094
      VEID      NPROC STATUS  IP_ADDR         HOSTNAME
      2094          1 running 192.168.2.94    ve2094
```

It seems to have only One process started! Is there any way to find out whats happening with that VE? vzvtl enter is not possible. (no pty)

btw I'running Ubuntu on a Debian host with vzctl version 3.0.22 and kernel 2.6.26-2-openvz-amd64.

I hope you could help me.
Thanks

Robert
