The problem is indeed upstart.

You need to mount some directories, usually done by initramfs, and start some things manually.

Maybe this will help:

description "upstart with openvz"

start on startup

task

pre-start script

mount -t proc proc /proc

mount -t devpts devpts /dev/pts

mount -t sysfs sys /sys

mount -t tmpfs varrun /var/run

mount -t tmpfs varlock /var/lock

mkdir -p /var/run/network

cat /proc/mounts > /etc/mtab

end script

script

init 2

ifconfig lo 127.0.0.1

/etc/init.d/networking restart

start rsyslog

end script

Create this file and copy it to (the container) /etc/init/openvz.conf

Both Karmic and Lucid expect a newer kernel version, but most things will work.

Regards,
