I was looking for a way to use OpenAFS inside a OpenVZ container and couldn't find any resources on it. Is it possible, and if it is, how does one accomplish it? My google-fu may not be up to par, but the only discussions I found on the matter were from 2006 and resulted in no solution.

Host kernel version: 2.6.18-194.8.1.el5.028stab070.2 (I do have OpenAFS enabled and running on the host)

Tool versions: 3.0.24.1-1

Currently trying to accomplish this with a CT running Ubuntu 9.10.

Thanks,  
Steve
