Subject: VPS for Oracle, requires SWAP partition

Trying to install Oracle into a VPS, Oracle for testing requires at least 1024 MB of SWAP defined. I have had no luck figuring out how to create a SWAP device within my RHEL VPS. Anyone have any ideas how I can create a SWAP within my VPS?

I have attempted the following,
MAKDEV zero (/dev/zero didn't exist)
dd if=/dev/zero of=/tmp/swapfile bs=1024 count=1000000
mkswap /tmp/swapfile
swapon -a /tmp/swapfile
swapon: /tmp/swapfile: Operation not permitted
swapon -s
swapon: /proc/swaps: No such file or directory

Thanks!
