actually got it working finally.

Duno what I was doing wrong.

for the record,

```
iptables -t nat -A POSTROUTING -s 10.0.1.0/24 -o eth0 -j SNAT --to 123.x.x.x
```

did the job

I have just managed to get transparent proxy working so that one node proxies to some other nodes but doesn't change the source ip and then the return is routed back via the proxy's ip too
