Subject: Strange problem with lockedpages limits

Since a few months it happens sometimes that the failcount increases without hitting the soft or hard limit:

uid	resource	held	maxheld	barrier	limit	failcnt
104:	lockedpages	0	948	1536	1536	8
103:	lockedpages	0	966	1536	1536	3

I'm using Debian 5.0.7 with Kernel linux-image-2.6.26-2-openvz-amd64, the containers with the mentioned problems have both running varnish 2.1, one with lighttpd behind, one with tomcat.

I really searched the forums, mailing lists and more but didn't find anything useful regarding this, any ideas?
