Subject: Privacy - Can OpenVZ admins spy on mounted (virtual) locations within a container?

Hi Everyone,

I was wondering if OpenVZ admins can spy on mounted virtual locations within a container? Such as, if I am a user inside a OpenVZ container, and I take an encrypted file and mount it to a location. Can people other than myself get access to that sensitive information?

I ask because other virtualization software is more isolated so you'd need to login to the actual system before you could see anything.
