@pyite, thanks for sharing your views. They are very useful.

These were definitely the kind of gotchas (Q4) I was looking for, s.t. I can watchout for those. So 'top' showing that there is no swap, does it mean, in reality the apps running in containers won't be swapped out, or it is just a limitation of the top in this environment ? Also from your reply, I get the impression that gotchas like these are documented somewhere or commonly discussed somewhere. Could you point me where exactly !
