Try this one:

[wiki.openvz.org/Download/kernel/rhel6/042test007.1](http://wiki.openvz.org/Download/kernel/rhel6/042test007.1)

Recompile it. Should work with Debian 6.

It is still testing kernel. If you are going to use new RAM limits with physpages and swappages set - there is a bug: [bugzilla.openvz.org/show\\_bug.cgi?id=1749](http://bugzilla.openvz.org/show_bug.cgi?id=1749) and server may stuck at cpu software lock.

Anyway - this kernel has a cpu limit future so you will be able to limit your cpu resources.
