From: Jacob Pan <jacob.jun.pan@linux.intel.com>

Fixing subject in cover letter, should be v4 instead of v3

Changelog:
v7: - use delayed workqueue instead of per cgroup kernel thread
  to manage toggling
 - make freezer.state higher priority than duty ratio setting
 - small correction in documentation

v6: - remove check for duty ratio == 100 case
v5: - improve error handling in duty ratio/ period writes
 - fix the logic to avoid kthread creation when ratio and
  period are invalid.
 - 100% frozen is not permitted in duty ratio set up

v4: - limit kthread creation only when valid duty ratio
  parameters are given.
 - changed period back to milisecond
 - consolidated paramter write functions

v3: - added documentation

v2:
 - use read_u64/write_u64 instead of string read/write
 - use period in second instead of ms
 - renamed duty_ratio to duty_ratio_pct, be more specific
 - removed locking around period and duty_ratio reads

Jacob Pan (1):
  cgroup/freezer: add per freezer duty ratio control
