Thanks my mistake.

Now I'm trying to install ovz panel

<http://code.google.com/p/ovz-web-panel/wiki/Installation>

Ran auto installer with no errors:

```
wget -O - http://ovz-web-panel.googlecode.com/svn/installer/ai.sh | sh
```

But, it says:

Starting services...

Starting OpenVZ Web Panel

=> Booting WEBrick...

=> Rails 2.2.2 application started on http://0.0.0.0:3000

[2011-03-10 20:47:31] INFO WEBrick 1.3.1

[2011-03-10 20:47:31] INFO ruby 1.8.5 (2006-08-25) [x86_64-linux]

Starting watchdog daemon...

Starting the daemon...

Syncing physical servers state...

Adding localhost to the list of controlled servers...

Panel should be available at:

<http://server1.host.com:3000>

However, I wish to access via IP like

<http://ipaddress:3000>

I went there, page not found.
