Hi folks,

Was playing around with ImageMagic and decided to create custom splash image with OpenVZ log from artwork Wiki page.

Basically, just resized and used convert tool from ImageMagic RPM:
~# convert -colors 16 openvzlogo.png splash.xpm
~# gzip splash.xpm
~# cp splash.xpm.gz /boot/grub/

File Attachments

1) splash.xpm.gz, downloaded 766 times
