Subject: NFS mount causing high loads

Has anyone else experienced this? We had a VE with an NFS mounted. We noticed very high loads of the server (in excess of 150) and we see this error in the messages:

Aug 14 05:16:54 hostname kernel: CT#100: nfs: server nfs.server.com not responding, timed out

When we disabled the NFS module, the load seemed to go down. Wondering if anyone else has noticed this as it seems like a bug in the OpenVZ kernel that happens when the NFS is unable to connect.
