Subject: Kernel Panic with latest CentOS 6 kernel

Hi,

I am trying to install OpenVZ inside VirtualBox 4.1 on CentOS 6.0.

I have got CentOS installed and running, and enabled the OpenVZ 2.6.32 kernel in YUM. Installed the vzkernel and vzctl packages, disabled SELINUX and modified sysctl.conf.

On reboot the kernel panics early on with errors about partitions, devices, and disks, so I am guessing something wrong with the virtual disks.

Anyone tried this before?
