Different Java Vendors:

Sun

OpenJDK (OK - this is a derivative of the Sun JDK)

Java Version: 1.6.x

Same behaviour - JVM crash or stop working (web apps).

Not every Java stack has this problem, but Alfresco, Liferay, Zimbra, etc.. make problems.

But we found a solution for this problem - assign at least 2 CPU to VPS, and all will work fine.

This is a very strange problem, because it seems to be hardware specific. See following post:
